Railroad Empire

An economy loop taught through interaction.

Choose a locomotive, deliver timber and develop a railway in one gameplay loop.

My contribution

Full playable implementation: game logic, UI, animation and asset adaptation. Scene behaviour, onboarding and game feel reflect my own implementation decisions.

The challenge

Fit an economy mechanic into a short session. Players need to understand why they are choosing a locomotive, where to place it and how resource delivery contributes to railway development.

The implementation

Connected train selection, different locomotive capabilities, route placement and timber delivery. Resource counters show progress, while contextual hints guide the first interactions.

The key decision

Built onboarding around the first delivery. Selection leads straight into action; train movement and changing counters show the outcome in the scene. The economy becomes clear as the player interacts.

Try it in the demo

Choose a locomotive, place it on a route and follow the first trip. Notice the hints and the resource counter changing after a timber delivery.

CASE STUDY / Action / 3D

Pixel Gun 3D

Aiming, camera response and weapon feel.

A first-person shooter with moving targets and weapon feedback in a voxel 3D scene.

My contribution

Full playable implementation: controls, enemy behaviour, camera, UI and asset adaptation. Animation and gameplay feedback were tuned through my own implementation decisions.

The challenge

Convey the feel of a shooter through simple touch controls. In a detailed voxel scene, players need to spot a target and understand how aiming leads to a shot.

The implementation

Connected a first-person camera, crosshair, moving enemies and an on-screen weapon. An in-scene hint introduces aiming, while weapon animation and target reactions provide shooting feedback.

The key decision

Kept aiming and feedback within the same view. The foreground weapon anchors the composition, while moving targets let players feel the controls from their first interaction.

Try it in the demo

Aim at a moving target. Watch how camera movement, firing, weapon animation and the enemy response work together.

CASE STUDY / Puzzle / 2D

Merge Mayor

A clear first move and tangible merge feedback.

A merge puzzle with evolving items and a board to clear of boxes.

My contribution

Full playable implementation: grid dragging, merge rules, board states, UI and asset adaptation. Onboarding, animation and game feel reflect my own implementation decisions.

The challenge

Teach merging through the first move and connect it to the objective: clearing boxes. Available items, obstacles and the outcome of an action all need to read clearly on one board.

The implementation

Implemented grid-based dragging, merge chains and obstacle state changes. The first-move hint introduces the gesture, while each item transformation shows the outcome of a merge.

The key decision

Kept onboarding on the board itself. The hint demonstrates a specific interaction; the resulting transformation gives players a rule they can then apply to other cells.

Try it in the demo

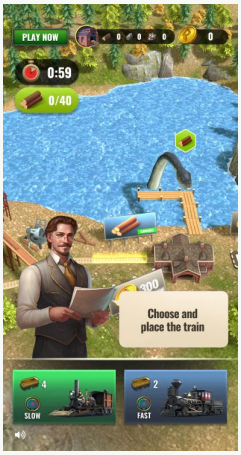

Drag an item onto a matching one and continue the merge chain. Notice the first-move hint, item transformations and changes to the boxes on the board.

01 / Simulation / 2D / 3D

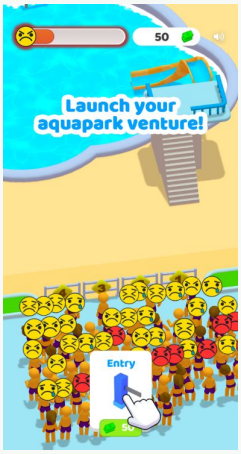

Railroad Empire

Resources & routes

Choose a locomotive, deliver timber and develop a railway in one gameplay loop.

Implementation

Connected train selection, different locomotive capabilities, route placement and timber delivery. Resource counters show progress, while contextual hints guide the first interactions.

02 / Simulation / 3D

My Aquapark

Build an aquapark

Open attractions, welcome visitors and grow an aquapark.

Implementation

Purchasable objects in a 3D scene, visitor queues, mood feedback and step-by-step hints.

03 / Action / 3D

Pixel Gun 3D

Aim & shoot

A first-person shooter with moving targets and weapon feedback in a voxel 3D scene.

Implementation

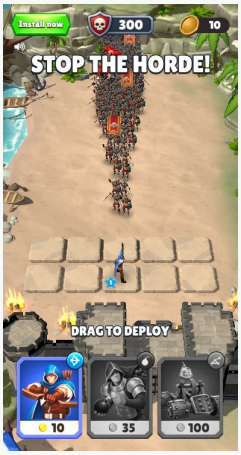

Connected a first-person camera, crosshair, moving enemies and an on-screen weapon. An in-scene hint introduces aiming, while weapon animation and target reactions provide shooting feedback.

04 / Strategy / 3D

Kingdom Clash

Stop the horde

Deploy units to defend against an advancing army.

Implementation

Drag-and-drop unit placement, a deployment grid, unit costs and a large-scale defensive scenario.

05 / Adventure / 3D

Last Day on Earth

Break into the base

A survival scenario with character movement and environmental interaction.

Implementation

A virtual joystick, action buttons, an isometric camera and an abandoned-base environment.

06 / Puzzle / 2D

Merge Mayor

Merge & clear

A merge puzzle with evolving items and a board to clear of boxes.

Implementation

Implemented grid-based dragging, merge chains and obstacle state changes. The first-move hint introduces the gesture, while each item transformation shows the outcome of a merge.

07 / Adventure / 3D

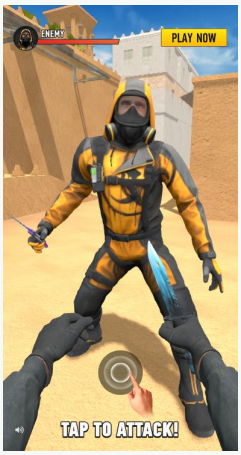

Mistland Saga

Workshop & progression

A fantasy 3D scene with resources and a workshop to unlock.

Implementation

A camera in a fantasy environment, workshop framing, resource UI and contextual hints.

08 / Action / 3D

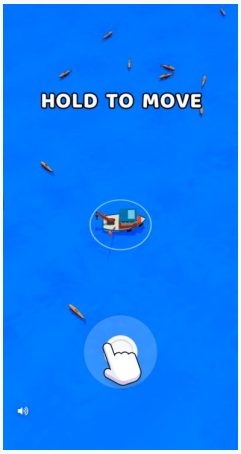

Standoff 2

Knife duel

First-person melee combat with enemy animation and a health bar.

Implementation

First-person weapons, melee animation, health state and an attack prompt.

09 / Simulation / 3D

Fish Idle

Fishing route

Steer a boat through a scene filled with moving schools of fish.

Implementation

A virtual joystick, boat movement, ambient fish and a gesture hint.

Worked with: AZUR Games / Melsoft Games / VIZOR Games / Beresnev Games / Appsulove / Glera Games / Highcore Games / Kefir / Playkot

10 / Simulation / 3D

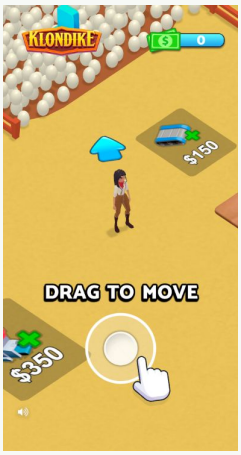

Candy Crush Saga

Chocolate factory

Collect chocolate and develop production in the Candy Crush world.

Implementation

A 3D character, virtual controls, chocolate collection, production zones and progress UI.

11 / Simulation / 3D

Klondike

Grow a farm

A farming scenario with character movement and purchasable objects.

Implementation

Character controls, purchase zones with visible costs, a farm environment and directional hints.

12 / Action / 3D

Web Master

Choose your hero

Choose a character before entering an action scenario.

Implementation

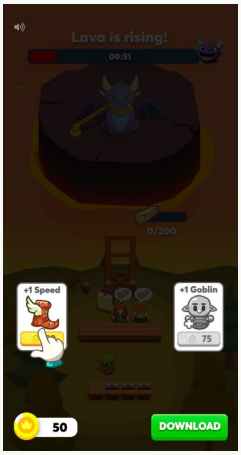

A 3D character carousel, selection controls, confirmation and a transition into gameplay.

Worked with: AZUR Games / Melsoft Games / VIZOR Games / Beresnev Games / Appsulove / Glera Games / Highcore Games / Kefir / Playkot

13 / Simulation / 3D

Forge Land

Gather & upgrade

Gather resources and upgrade workers as lava rises.

Implementation

Hiring and speed controls, upgrade costs, a resource counter and a timed scenario.

14 / Action / 3D

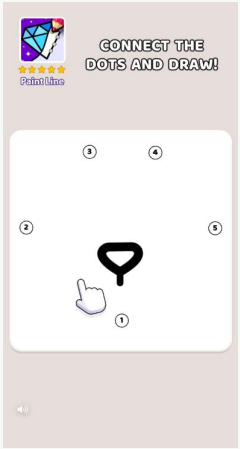

World War Heroes

Cover your allies

First-person shooting across a layered combat environment.

Implementation

Aiming, a first-person weapon, target highlights, an ammo counter and atmospheric effects.

15 / Puzzle / 2D

Paint Line

Connect & draw

Connect numbered dots with a continuous gesture.

Implementation

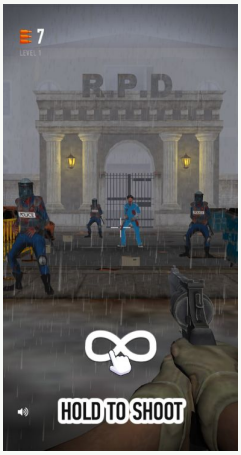

Numbered points, line tracking, a directional hint and gradual picture completion.

Worked with: AZUR Games / Melsoft Games / VIZOR Games / Beresnev Games / Appsulove / Glera Games / Highcore Games / Kefir / Playkot

16 / Action / 3D

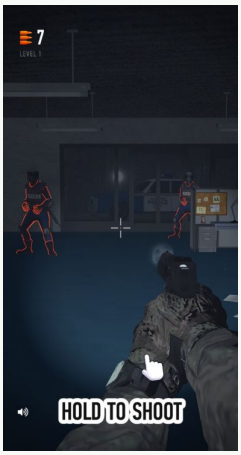

Zombie Shooter

Police station defence

A rainy police-station shooter with limited ammunition.

Implementation

A first-person camera, hold-to-aim controls, multiple enemies, ammunition and weather effects.

17 / Action / 3D

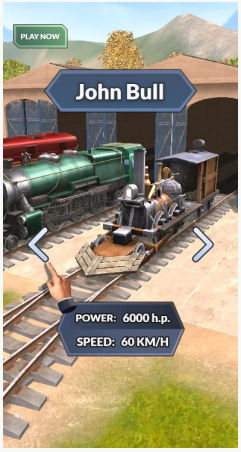

Zombie Shooter

Night encounter

An indoor firefight with outlined enemies in a dark environment.

Implementation

Enemy outlines, a crosshair, weapon animation, an ammo counter and a hold-to-shoot hint.

18 / Simulation / 3D

Railroad Empire

Locomotive collection

Choose a locomotive in a 3D depot and compare its power and speed.

Implementation

A 3D depot carousel, locomotive power and speed statistics, a gesture hint and a transition to the route.

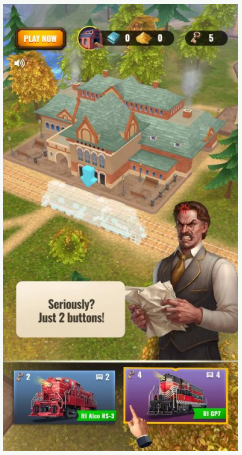

Worked with: AZUR Games / Melsoft Games / VIZOR Games / Beresnev Games / Appsulove / Glera Games / Highcore Games / Kefir / Playkot

19 / Simulation / 3D

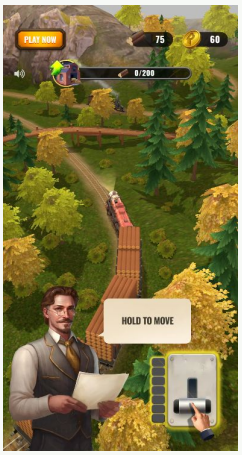

Railroad Empire

Choose a locomotive

Compare trains and develop a route around a railway station.

Implementation

Locomotive cards with stats, selection feedback, a 3D station and resource UI.

20 / Simulation / 3D

Railroad Empire

Drive the train

Drive a train along a forest route using a lever.

Implementation

Hold controls, train animation, a route-following camera and resource progression.

21 / Simulation / 3D

Railroad Empire

Inside the cab

First-person train controls with an interactive lever inside the cab.

Implementation

A first-person cab, a draggable lever, a dashboard and railway movement.
